Partwell are the European Agent for Gerber Profile Die Tool Production System

Partwell are pleased to be working with Gerber Innovations, a world pioneer in die tool production systems to cover all carton packaging applications.

The Gerber Profile™ is a Diemaker unlike any other...

...a highly-accurate, exceptionally versatile machine that enables die shops to perform multiple functions on a single piece of affordable equipment.

A revolutionary high speed routing system which offers **easy**, **accurate** and **cost effective** die fabrication. With its unique **multi-functionality** it can produce a complete range of die tool sets with unparalleled precision. The optional application kits listed below allow you to build the perfect and most cost effective router to suit your requirements.

- **Folding carton dieboards**
- Blankers (male and female)
- **Phenolic counters**
- Coating blankets
- Corrugated dieboards
- **Strippers (male and female)**
- Custom samples
- **1mm thin plates**

The Profile™ does it all in one machine and is significantly less expensive than a laser machine.

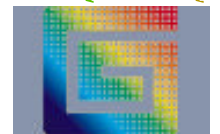

It even chamfers automatically on both sides of the same board in perfect registration and works with a wide range of materials, including plywoods, phenolic and plastic.

The powerful CAM software will automatically process jobs and can be integrated with any design system for seamless performance and drive one or more machines whilst generating subsequent tools.
