

One Stop Shop

The UK-based Partwell Group is focused on providing its customers with the widest range of high quality products to serve the die-making and carton converting industries. This 'One Stop Shop' approach has provided clients with a greater product selection, easier and convenient purchasing as well as improved commercial benefits from their global product sourcing and supply.

This successful approach has resulted in the creation of a new and easy to use website (www.partwell.com) where all products and services can be viewed. With a product range covering applications in CAD design, die-making, pre-press make ready, die-cutting and finishing, Partwell Group have a large inventory of supply.

Representing world-class manufacturers including Böhler, Martin Miller, C&T Matrix and Gerber Innovations, Partwell Group offer the highest quality products that customers can rely on. Constant innovation and product development has created many new products, including the following:

TiNiT: This highly bendable cutting rule has a thin film coating of Titanium applied to the cutting bevel. It is rapidly being recognised as a class leading cutting rule that provides ultimate wear resistance during long production runs, even on highly abrasive substrates like foil boards and recycled plastics.

Stabilocut: With a unique bevel geometry, this rule provides the converter with a lower make ready system and a highly stable cutting profile even after the longest production runs.

Reflexion: This cutting rule has a highly polished cutting bevel for a really sharp edge finish that minimises the production of dust, swarf and angel hairs for clean cartons.

Plasma: The range of plasma hardened cutting rules provide a greater edge hardness on the cutting rule for long lasting cutting performance, plus its mirror like bevel finish provides dust free cutting.

Creasing Matrix: Since the amalgamation of Channel and Trimplex, to establish C&T Matrix, the standard brand leading products

TRAX, XTC and ORIGINAL are now joined by other popular quality brands such as REFLEX, X-PRESS and JAZZ. This vast range of creasing matrix ensures Partwell have a suitable product to cover all creasing applications.

Patch-up Tape: New and improved colour coded self-adhesive patch up tape offers ease of use and thickness selection with extremely competitive pricing.

Gerber Profiler: This router is an exceptionally versatile machine that offers the die-maker multi-functionality to produce flat and accurate dieboards, stripper dieboards, blankers, custom samples and creasing counters on this single piece of affordable equipment. It has superior throughput speeds and low operating costs with virtually no maintenance.

As the Partwell Group continue to supply their customer base with the ultimate 'One Stop Shop', the online product catalogue www.partwell.com is regularly updated with the latest product developments, industry news, technical support, video demonstrations and promotional offers.

Small Footprint

Established in 2004, Korea-based KDM Co Ltd personnel can boast 20 years experience in the die-cutting industry. The many features of the machines available include non stop feed, auto stripping, non stop take-off, auto sensor cleaning, auto lubrication, centralised drive with cam driven operation and overall small footprint. KDM have already established a good installed base with a worldwide sales network of agents.

The Prexe 1060 S model has attracted significant interest from European converters and further afield. It represents a high quality machine at a reasonable price.
