

## **Essential Block Care Information**

For the prolong life of the product we recommend the following action to be taken:

- ❑ Every week the block should be turned over and rotated to ensure even Wear and moisture intake.
- ❑ Avoid soaking the block, as it will cause swelling.
- ❑ Clean daily with a damp cloth and either wire block brush or block scraper.
- ❑ Do not defrost or open vacuum packs on the board.

## **Care of End Grain Chopping Blocks**

- ❑ Clean the block with a warm damp cloth but do not immerse in water, as this will cause the block to swell and split.
- ❑ It is recommended that the block be oiled every month with a light vegetable oil this will feed the block and prevent any splitting and help stop decolourisation.

## **Storage Instruction**

- ❑ Blocks must be stored on their side edge/end up, they **MUST NOT** be stacked on top of each other in any circumstances.
- ❑ They must be kept in an ambient temperature i.e. no fluctuations in heat, in damp-free conditions away from draughts.
- ❑ Do not wrap for storage.

*No liability can be accepted if any of the above is not observed.*
